

cell 1 mean to import panda library for further function

```
import pandas as pd

df = pd.read_csv("netflix_titles.csv")
```

`df.head()` means returning first 5 rows from alot of dataset

```
df.head()
```

	show_id	type	title	director	cast	country	date_added	release_y
0	s1	Movie	Dick Johnson Is Dead	Kirsten Johnson	NaN	United States	September 25, 2021	2
1	s2	TV Show	Blood & Water	NaN	Ama Qamata, Khosi Ngema, Gail Mabalane, Thaban...	South Africa	September 24, 2021	2
2	s3	TV Show	Ganglands	Julien Leclercq	Sami Bouajila, Tracy Gotoas, Samuel Jouy, Nabi...	NaN	September 24, 2021	2
3	s4	TV Show	Jailbirds New Orleans	NaN	NaN	NaN	September 24, 2021	2
4	s5	TV Show	Kota Factory	NaN	Mayur More, Jitendra Kumar, Ranjan Raj, Alam K...	India	September 24, 2021	2

[Generate code with df](#)

[New interactive sheet](#)

df.info() provides structural summary of dataset in my case it tell about number of row and its name same goes for column

```
df.info()
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 8807 entries, 0 to 8806
Data columns (total 12 columns):
#   Column          Non-Null Count  Dtype
---  -
0   show_id         8807 non-null   object
1   type            8807 non-null   object
2   title           8807 non-null   object
3   director        6173 non-null   object
4   cast            7982 non-null   object
5   country         7976 non-null   object
6   date_added      8797 non-null   object
7   release_year    8807 non-null   int64
8   rating          8803 non-null   object
9   duration        8804 non-null   object
10  listed_in       8807 non-null   object
11  description      8807 non-null   object
dtypes: int64(1), object(11)
memory usage: 825.8+ KB
```

df.describe() tell about descriptive statistics of data. include='all' summarizes both numeric and text columns.

```
df.describe(include='all')
```

	show_id	type	title	director	cast	country	date_added	release_year

isnull() checks every cell/ .sum() counts true values.

```
df.isnull().sum()
```

	0
show_id	0
type	0
title	0
director	2634
cast	825
country	831
date_added	10
release_year	0
rating	4
duration	3
listed_in	0
description	0

dtype: int64

df.isnull()

	show_id	type	title	director	cast	country	date_added	release_year	
0	False	False	False	False	True	False	False	False	
1	False	False	False	True	False	False	False	False	
2	False	False	False	False	False	True	False	False	
3	False	False	False	True	True	True	False	False	
4	False	False	False	True	False	False	False	False	
...	...	...	...	...	...	...	...	...	
8802	False	False	False	False	False	False	False	False	
8803	False	False	False	True	True	True	False	False	
8804	False	False	False	False	False	False	False	False	
8805	False	False	False	False	False	False	False	False	
8806	False	False	False	False	False	False	False	False	

8807 rows × 12 columns

df = df.dropna() delete the row contains NAN

```
df = df.dropna()
```

fillna replace empty space with 'unknown'.

```
df["director"] = df["director"].fillna("Unknown")
```

here it replace with 'not available'.

```
df["cast"] = df["cast"].fillna("Not Available")
```

it first select country column then find one most used and returns its name.

```
df["country"] = df["country"].fillna(df["country"].mode()[0])
```

```
df["country"].mode()
```

```

      country
0  United States

```

```
dtype: object
```

```
df["country"].mode()[0]
```

```
'United States'
```

it vanish column with no data.

```
subset=["date_added"]
```

cleaned code:)

```
df.isnull().sum()
```

```

      0
show_id  0
type     0

```
